

System of quick change of moulds and reducing frames.

The solution provides a quick, easy and convenient way to change the mould in the machine. The system is made of an additional aluminium table top, a folding support structure and a system of pneumatic interlocks. After unlocking, the table top with the mould can be pulled out of the machine using the supports. The supporting structure can be unfolded to the outside of machine and folded inside. After the mould or reduction frames have been replaced and the table is pushed in, the table top is pneumatically locked on the working table.

Optionally, you can buy a second aluminium table top. This enables the replacement of the entire "table top + mold" set and speeds up the replacement process even more.
